

The application of digital content curation

Ming-Shu Yuan

Associate Professor and Director, the Department of Information and Communication,
Shih Hsin University, Taipei, Taiwan

The rise of internet and social media with rapid growth in digital information; the quality merits and difficult true result in changes of information dissemination and information sharepocalypse. Digital content curation originated from the demand on information selecting and sharing of internet community, based on curators' aesthetics, values and personal tastes to build up relevant contents from personal interested topics or hot issues and presented in blogs, websites or platforms by providing links and evaluate the original source. Through curatorial process with manual or semi-automatic mechanisms screening a large amount of digital information to extract clear and useful information which is useful to community for information dissemination, sharing, learning, seeking answers, exchanges, social networks, and reputation enhancement. The rapid expanding on curation tools and platforms is also speeding up the development of digital content curation. The common methods on digital content curation including aggregation、distillation、elevation、mash-up, and chronology. This research will introduce applications for library and magazines publishers. It will also share the experience of curation workshops related to the applications.
